

## The Ultimate Compact Sea Kayak

The Gecko is the fastest and most manoeuvrable sea kayak in its class!

The multi-chined hull delivers speed, a tight “turning circle” (the Gecko will turn in it’s own length!), and secondary stability when rolling and bracing.

The “flap” steering system quickly and easily adjusts for people of different heights and gives a firm platform to brace against when paddling; no need to keep sliding footrests parallel to go in a straight line!

Lifting & lowering the traditional drop-over rudder is safe and easy because the pull cords are located on the front deck. This improves access when the rudder needs to be raised or lowered in a hurry and maintains maximum stability of the kayak by keeping the paddler in a forward facing position.

Foam bulkheads provide additional floatation and create dry-store areas in the front and rear of the kayak. Access to your gear is via easy to remove and replace rubber “pop-on” hatches.

Producing all of the moves that experienced paddlers require, whilst nurturing the learning experiences of people new to sea kayaking, the Gecko is fast becoming the Preferred Sea Kayak of Smaller Paddlers!

## Specifications

<b>Length</b>	4.4 metres (14'5')
<b>Width</b>	62 cm
<b>Depth</b>	34 cm
<b>Cockpit</b>	50 x 86 cm
<b>Weight</b>	20 kg

### Hatches:

<b>Front</b>	18 cm round
<b>Rear</b>	41 x 23 cm oval

### Dry Storage:

<b>Front</b>	50 Litres
<b>Rear</b>	85 Litres

### Maximum Weight Capacity:

140 kilograms

### Paddler Profile:

Beginner to Experienced  
Teenager to Adult (Up to 6'1")

### Recommended for the following water types:

Flat Water to Open Ocean, Bays, Estuaries

### Applications:

Touring (Ocean and Flat water)  
Fitness Training  
Hire Fleets

Accessories that will add to the safety & enjoyment of your

### Gecko Sea Kayak:

- ▼ Tyronsea Double Paddle with Fibreglass Shaft, Heatshink and Grip
- ▼ Personal Floatation Device (PFD)
- ▼ Full neoprene spray deck
- ▼ Sail Kit
- ▼ Paddle Float
- ▼ A “spare” break-down paddle
- ▼ Dry bags including tapered shapes
- ▼ Pumps (hand or electric bilge)
- ▼ Towline
- ▼ Compass
- ▼ Paddle leash

good clean fun™

# 17 reasons why the **Gecko** is the ultimate compact Sea Kayak

- 1** The multi-chined hull makes the Gecko super fast with superior turning ability. The chines create secondary stability to assist when bracing or performing an Eskimo roll.
- 2** The concave bow deflects water away from the midline of the Gecko, to keep the paddler dry and minimise water in the face
- 3** The front deck is “peaked” providing additional legroom. This makes it easy to enter and exit the Gecko and allows “Room to Move” on the water during extended periods of paddling. The pitch of the deck increases the rate at which water drains away if a wave comes over the top and the textured surface diffuses glare when paddling into the sun.
- 4** The cockpit is large enough to easily exit if required, whilst being snug so that you can “lock in” and become part of the kayak.
- 5** The thigh brace is not moulded in as part of the hull; it is a standard add-on that can be attached or removed as required. It helps you to become part of your Gecko when stabilizing in choppy water or performing an Eskimo roll.

- 6** A generous combing gives plenty of underside area to attach the spraydeck securely.
- 7** The seat is contoured for comfort. The front edge has a long, soft and gradual profile that eliminates pressure at the back of the thighs, so that you can paddle for hours in absolute comfort!
- 8** The backrest is angle adjustable and cradles the lower back, giving maximum comfort and support. There is space behind the seat for an electric bilge pump or other essentials such as clothing and food.
- 9** The footrest and “flap control” steering system give a firm foot support to brace against when paddling. To turn the Gecko, simply push the corresponding flap forward. To come back onto a straight course, touch the opposite flap, until they are both back in the neutral position. It is almost as if the Gecko runs on autopilot!
- 10** To raise and lower the traditional drop-over rudder, simply pull on the control ropes on the front deck. This feature allows the paddler to maintain maximum stability and comfort by always remaining in a forward facing position.
- 11** All rudder parts are made from 316 marine grade stainless steel. They are laser cut for precision shaping and powder coated in black to minimise “Flashing”.

- 12** A “keeper” on the rear deck securely holds the rudder blade in place during car transportation.
- 13** Foam bulkheads provide structural support pillars and additional floatation. They create two individual storage sections, situated in the front & rear of the Gecko.
- 14** The storage sections are accessed through large rubber pop-on hatches that are quick and easy to remove and replace, without having to fuss with clips and buckles.
- 15** 6mm decklines around the Gecko provide numerous secure places to attach any gear being transported on the deck or hold onto during rescue procedures. The supports the decklines run through are super strong and will not pull off as they are moulded in as part of the hull.
- 16** Bungy on the front deck provides a point to secure any accessories that you need to have at your fingertips.
- 17** Moulded hand toggles are located at each end of the Gecko and make 2 person carrying easy comfortable and easy.
